A Letter to the Faithful from the Bishops of Colorado

The bishops of Colorado affirm that the use of some COVID-19 vaccines is morally acceptable under certain circumstances. The development and utilization of vaccines to eradicate certain infectious diseases is a remarkable advancement in medical technology. The Catholic Church supports the morally legitimate development of vaccines to eliminate suffering and to promote human dignity and the common good. Considering the worldwide impact of COVID-19, vaccines for this virus seems to be especially necessary and urgent.

At the same time, we must remember that a good end cannot justify evil means. Vaccines need to be developed according to ethical criteria. Human cell lines that come from aborted fetuses should not be used in the design, development, production, and lab testing of vaccines. Unborn babies cannot be killed and used to heal other people. The development of vaccines and other medicines using aborted cells is ethically unacceptable. It offends the dignity of the aborted baby and his/her family, as well as the dignity of the medical vocations of doctors and scientists. We affirm the Church's teaching that *"the corpses of human embryos and fetuses, whether they have been deliberately aborted or not, must be respected just as the remains of other human beings."*¹ The ethical problems with regard to "cooperation in evil" are important to consider in accepting or promoting any vaccine.²

The Catholic Church teaches that it is morally permissible to seek and receive a vaccine that has not been ethically developed, when there are no other alternatives and there is a serious risk to one's health, and provided any immoral cooperation in evil is excluded.³ The Pontifical Academy for Life states that *"all clinically recommended vaccinations can be used with a clear conscience and that the use of such vaccines does not signify some sort of cooperation with voluntary abortion."*⁴ In the case of a global pandemic, the Catholic commitment to promoting the common good includes considering the health and safety of others. However, if individuals have serious moral objections or health concerns about vaccines, those concerns should be respected by society and government, and those individuals should not be forced into vaccination, contrary to their conscience. The government should not impose the COVID-19 vaccine on its citizens.

⁴ "Note on Italian Vaccine Issue," Pontifical Academy for Life, July 31, 2017.

The rapid spread of the COVID-19 pandemic has caused many countries to expedite the development of a vaccine. Several different vaccines have been created, with some being made ethically, while others unethically used aborted fetal cells in their design, development, production and confirmatory lab tests. The Charlotte Lozier Institute, a national pro-life research nonprofit, has provided a helpful list of all vaccines being developed, indicating which are morally compromised. We encourage our community to review that list.⁵

Because of medical advancements, the development of vaccines no longer requires the use of human cells. Many vaccines are now created using no cells, or cells from animals, insects, chicken eggs, or yeast. In the case of COVID-19, eight vaccines were developed by the United States' "Operation Warp Speed" and six of those vaccines **do not** use aborted fetal cells, including imminent vaccines from Pfizer and Moderna.

In the case of the Pfizer and Moderna COVID-19 vaccines, it is morally acceptable to use them, as neither company used fetal cell lines from an aborted baby at any level of design, development, or production. However, we must also acknowledge that these two vaccine options are not untouched by abortion, as both relied fetal cells from an aborted baby for one of the confirmatory lab tests. In our current circumstances, when better options are not available, the use of the Pfizer and Moderna vaccines remains a morally valid option.

Catholics have the duty to use vaccines that respect human life, when they are available. We are thankful that the many companies and countries working to protect human life and health from COVID-19 by developing a vaccine are also considering the ethical development and trials of those vaccines.

Sincerely yours in Christ,

Most Reverend Samuel J. Aquila
Archbishop of Denver

Most Reverend Jorge Rodriguez
Auxiliary Bishop of Denver

Most Reverend Stephen J. Berg
Bishop of Pueblo

Most Reverend Michael J. Sheridan
Bishop of Colorado Springs
